Easy Energy Project Finale in Riga

From 28 to 30 September, Riga hosted the closing events of the international Easy Energy project, bringing together project partners and members of the Hanse-Parlament network. The three-day programme provided an opportunity to review the project's achievements, discuss ways to reduce energy consumption, exchange experience among Baltic Sea Region countries, and visit facilities where energy efficiency measures have already been implemented in practice. On 28 September, Easy Energy partners took part in a practical workshop and a study visit to Ādaži Municipality, while the project's Final Conference was held on 29 September.

Panevėžys District received two Easy Energy Impact Awards for its activities and achievements within the project. One of the awards was presented to the Panevėžys District Municipality Administration in recognition of the wide implementation of project measures in public buildings across the district and their long-term benefits. The second award went to Dembava Kindergarten "Smalsutis", which stood out for implementing the largest number of energy-saving solutions.

These awards marked the culmination of three years of work involving 23 municipal institutions in Panevėžys District, ranging from elderships to schools, gymnasiums and kindergartens. The participating institutions explored ways to use energy more efficiently without major investments. Heating and ventilation processes, electricity and water consumption, as well as opportunities to reduce heat loss in buildings were assessed. An important part of the project was not only the implementation of individual measures, but also monitoring their impact and evaluating their effectiveness in practice.

The closing meetings in Riga offered an opportunity to consider the project's results in a broader international context. In addition to conference presentations and discussions, participants visited public buildings in Latvia to see how energy-saving measures are applied in everyday operations. The study visits included a kindergarten where energy efficiency solutions have been introduced in the swimming pool area, as well as the reconstructed Carnikava School.

The Hanse-Parlament General Assembly was held in Riga alongside the Easy Energy closing events. On the final day, the Latvian Chamber of Commerce and Industry hosted the "SMEs in Focus" workshop, dedicated to developing new project ideas and strengthening future cooperation between participating organisations.

More information about the ongoing "Easy Energy" project is available on the website <https://interreg-baltic.eu/project/easy-energy/>. The project is co-financed by the Interreg Baltic Sea Region transnational cooperation program.
