## Panevėžys District Experience Presented at a Conference on Energy Project Opportunities

On 2 October, representatives of Panevėžys District Municipality Administration participated in the online conference “From Idea to Solution: Experiences and Opportunities of Energy Projects.” The event was dedicated to the 15th anniversary of Interreg Cooperation Day and highlighted how international cooperation helps address common regional challenges and create tangible benefits for people and organisations.

During the conference, three international projects related to the energy transition and practical energy-saving solutions were presented: “Repower Industries,” “Easy Energy” and “Energy Circle.” Participants shared their experience in implementing the projects, discussed the solutions applied and results achieved, as well as opportunities to build on these experiences through further cooperation and more sustainable energy solutions in the Panevėžys region.

The experience of Panevėžys District Municipality Administration in implementing the international “Easy Energy” project was presented by Domas Jankevičius, Chief Specialist of the Construction and Infrastructure Department. In his presentation, “Energy Saving with Small Investments. The Experience of Panevėžys District Municipality Administration in the Easy Energy Project,” he introduced an approach based on simple energy-saving solutions requiring relatively small investments.

Renata Gražinienė, Chief Specialist of the Strategic Planning and Asset Management Department of Biržai District Municipality Administration, presented the experience gained through the “Repower Industries” project in her presentation “Learning in Rhythm – the Green Path towards Energy Independence.”

The conference concluded with a presentation on the experience of the “Energy Circle” project. Lina Kiršienė and Deimantė Martinaitienė, specialists from Biržai District Municipality Administration, discussed the pursuit of energy independence and the importance of long-term planning in their presentation “The Path towards Energy Independence: from Short-Term Solutions to Long-Term Planning.”

The event provided an opportunity to share experience gained through different international projects, compare the solutions being implemented and explore ways to apply successful practices more widely. Such events contribute to stronger cooperation between municipalities and encourage the implementation of practical, sustainable and economically viable energy solutions across the region.

More information about the ongoing “Easy Energy” project is available on the website <https://interreg-baltic.eu/project/easy-energy/>. The project is co-financed by the Interreg Baltic Sea Region transnational cooperation program.
